

SPAY/NEUTER SURGERY Consent Form

Procedure: _____

Like you, our greatest concern is the well-being of your pet. Before putting your pet under anesthesia, we will perform a full physical examination. However, many conditions, including disorders of the liver, kidneys, or blood, are not detected unless blood testing is performed. Such tests are important before any kind of surgery.

For these reasons, we do a blood screening before such procedures. These tests are important and will help ensure the health and safety of your pet before anesthesia is employed.

It is important to understand that a pre-anesthetic/Complete Blood Count profile does not guarantee the absence of anesthetic complications. It may, however, greatly reduce the risk of complications as well as identify medical conditions that could require medical treatment in the future.
